

NAGENDRA VULLAM

JAVA FULLSTACK DEVELOPER

rajvu07@gmail.com

+1 469-355-5786

SKILLS

Programming Languages:

Java, J2EE, JavaScript, TypeScript.

Backend Frameworks:

Spring Framework, Spring Boot, Spring MVC, Spring Data JPA, Spring Web Services.

Architecture & APIs:

Microservices Architecture, RESTful APIs, SOAP Web Services, Event-Driven Architecture, GraphQL.

Frontend Technologies:

Angular, ReactJS, HTML5, CSS3.

Cloud Platform:

AWS Services, EC2, EKS, S3, RDS, IAM, VPC, Auto Scaling, Load Balancers, CloudWatch, Lambda.

Containerization & Orchestration:

Docker, Kubernetes, AWS EKS.

Messaging & Streaming:

Apache Kafka, JMS, RabbitMQ.

Databases:

Oracle, MySQL, PostgreSQL, MongoDB, Cassandra.

Caching:

Redis.

AI / Generative AI Skills:

OpenAI, Generative AI, Prompt Engineering, LangChain, RAG, GitHub Copilot.

CI/CD & Version Control:

Jenkins, GitHub Actions, GitLab CI, Git, GitHub, Terraform, Ansible.

Logging, Monitoring & Testing:

Splunk, AWS CloudWatch, Grafana, Prometheus, JUnit, Mockito, REST API Testing.

PROFESSIONAL SUMMARY

- Java Fullstack Developer with 8+ years of experience building scalable and high-performance enterprise applications using **Java, Spring Boot, and microservices architecture**.
- Strong experience in backend development using **Spring Boot** for building **RESTful** and microservices-based applications with clean architecture and best practices.
- Integrated **Generative AI capabilities** into Java-based applications to enable intelligent features such as automated responses, summarization, and content generation.
- Developed backend services that interact with **LLM APIs (such as OpenAI)** to process user inputs and generate dynamic AI-driven outputs.
- Implemented **Retrieval-Augmented Generation (RAG)** by combining enterprise data with **AI models** to provide context-aware and accurate responses.
- Experienced in integrating **Anthropic Claude** models to develop secure, scalable, and intelligent **AI-driven** features, including **conversational interfaces, content generation**, and context-aware data processing within enterprise applications.
- Designed **AI-powered microservices** that integrate seamlessly with existing **Spring Boot systems using REST APIs** and asynchronous communication.
- Strong experience in developing and consuming **RESTful and SOAP Web Services, ensuring reliability, security, and API versioning**.
- Extensive hands-on experience with **AWS cloud services** including **EC2, EKS, S3, RDS, IAM, VPC, Auto Scaling, Load Balancers**, and CloudWatch, designing highly available, secure, and scalable cloud-native applications.
- Strong hands-on experience with **AWS EKS** for deploying, managing, and scaling containerized **Spring Boot microservices**, leveraging **Kubernetes** features such as pods, services, deployments, and auto scaling.
- Experience with **Docker and Kubernetes (EKS)** for containerizing and orchestrating Spring Boot microservices in scalable environments.
- Extensive experience working with **relational and NoSQL** databases including **Oracle, MySQL, PostgreSQL, MongoDB**, with strong expertise in **schema design**, complex queries, performance tuning, and data integrity management.

CITI Bank, Dallas, TX
Jan 2023 - Present
SeniorJava FullStack Developer

PROFESSIONAL EXPERIENCE

Responsibilities:

- Designed, developed, and maintained scalable backend services using **Core Java, Spring Boot, Spring MVC, Spring Data JPA**, and RESTful APIs within a microservices architecture.
- Built enterprise-grade applications using **Spring Framework** features such as dependency injection, **AOP, Spring MVC**, and **Spring Data** for modular and maintainable systems.
- Developed cloud-ready microservices using **Spring Boot** with robust **exception handling, validation**, and seamless integration with databases, messaging systems, and AWS infrastructure.
- Designed and implemented enterprise-grade **Generative AI** solutions leveraging **Large Language Models (LLMs)** to automate business workflows such as document processing, customer support, and knowledge retrieval.
- Architected and deployed **Retrieval-Augmented Generation (RAG)** pipelines by integrating **vector databases** with enterprise data sources, enabling context-aware and accurate AI-driven responses.
- Integrated **Large Language Models from OpenAI and Anthropic (Claude)** into backend services to enable intelligent features such as **conversational AI, content generation**, and contextual data processing.
- Led the integration of **AI capabilities into existing enterprise platforms**, enabling features like semantic search, summarization, and conversational interfaces for improved user experience.
- Designed and managed **relational and NoSQL databases (Oracle, PostgreSQL, MongoDB)**, focusing on schema design, query optimization, and high-performance data access.
- Implemented **CI/CD pipelines using Jenkins and GitHub Actions** to automate build, test, and deployment processes for faster and reliable releases.
- Developed event-driven architectures using **Apache Kafka**, enabling real-time data streaming, system decoupling, and high-throughput processing.
- Managed source code using **Git and GitHub**, applying branching strategies, **pull requests, code reviews, and version control** best practices to support collaborative development.
- Actively collaborated in **Agile/Scrum environments**, participating in code reviews, sprint planning, production support, monitoring, and continuous improvement initiatives.

HCL Technologies, Chennai, India
Nov 2020 - Nov 2022
Senior Java Developer

Responsibilities:

- Engineered scalable backend components using **Java, Spring Boot, Spring Cloud, and REST** principles to support distributed enterprise applications.
- Developed and maintained **Spring Boot microservices**, integrating databases, caching layers, and messaging systems.

Accenture, Hyderabad, India
Jan 2017 - Oct 2020
Java Developer

- Designed and consumed **RESTful APIs**, handling request/response mapping, error handling, and secure inter-service communication.
- Built backend systems using **Spring Framework (DI, MVC, layered architecture)** to ensure modular, maintainable applications.
- Developed dynamic and responsive user interfaces using **Angular, implementing** data binding and seamless **API integration**.
- Implemented event-driven architecture using **Apache Kafka producers and consumers** for asynchronous communication between microservices.
- Designed inter-service communication using both synchronous **REST APIs and asynchronous Kafka messaging** to improve resiliency and decoupling.
- Worked with **relational and NoSQL databases (MySQL, PostgreSQL, MongoDB)**, focusing on schema design, indexing, and query optimization.
- Optimized backend performance using efficient **multithreading**, connection pooling, and service-layer tuning.
- Leveraged **AWS services (EC2, S3, IAM, VPC, CloudWatch)** for deploying, monitoring, and managing cloud-based applications.
- Contributed to **CI/CD pipelines using Jenkins and GitHub Actions**, automating build, test, and deployment workflows.
- Performed unit and integration testing using **JUnit and Mockito**, ensuring code quality and reducing production issues.

Responsibilities:

- Developed and maintained backend applications using **Core Java, Spring Boot, and Spring MVC** following object-oriented programming principles and enterprise coding standards.
- Designed and built **RESTful APIs using Spring Boot, implementing CRUD operations**, request/response handling, exception management, and service integrations.
- Worked extensively with **Spring Data JPA and Hibernate** to implement entity relationships, repository methods, and optimized database operations.
- Hands-on experience with **MySQL, PostgreSQL, and MongoDB, including SQL queries**, joins, schema design, query optimization, and NoSQL data modeling.
- Integrated frontend applications using **HTML, CSS, JavaScript, and React/Angular with backend REST APIs** for dynamic user interactions and data processing.
- Utilized **Git and GitHub for version control, branch management, pull requests, code reviews**, and resolving merge conflicts in collaborative Agile environments.
- Implemented unit testing using **JUnit and Mockito**, ensuring application reliability, code quality, and defect-free deployments.
- Leveraged webMethods, **Docker, and CI/CD pipelines for API orchestration, containerization**, deployment automation, and production support activities.
